This has happened before

Then - Computing

Assembly → **High-Level-Code**

Chip-specific instructions

Compiler generates machine instructions

Now - Development

Lines of Code → **Specification**

Developer implements line by line

State behavior; coding agent writes code

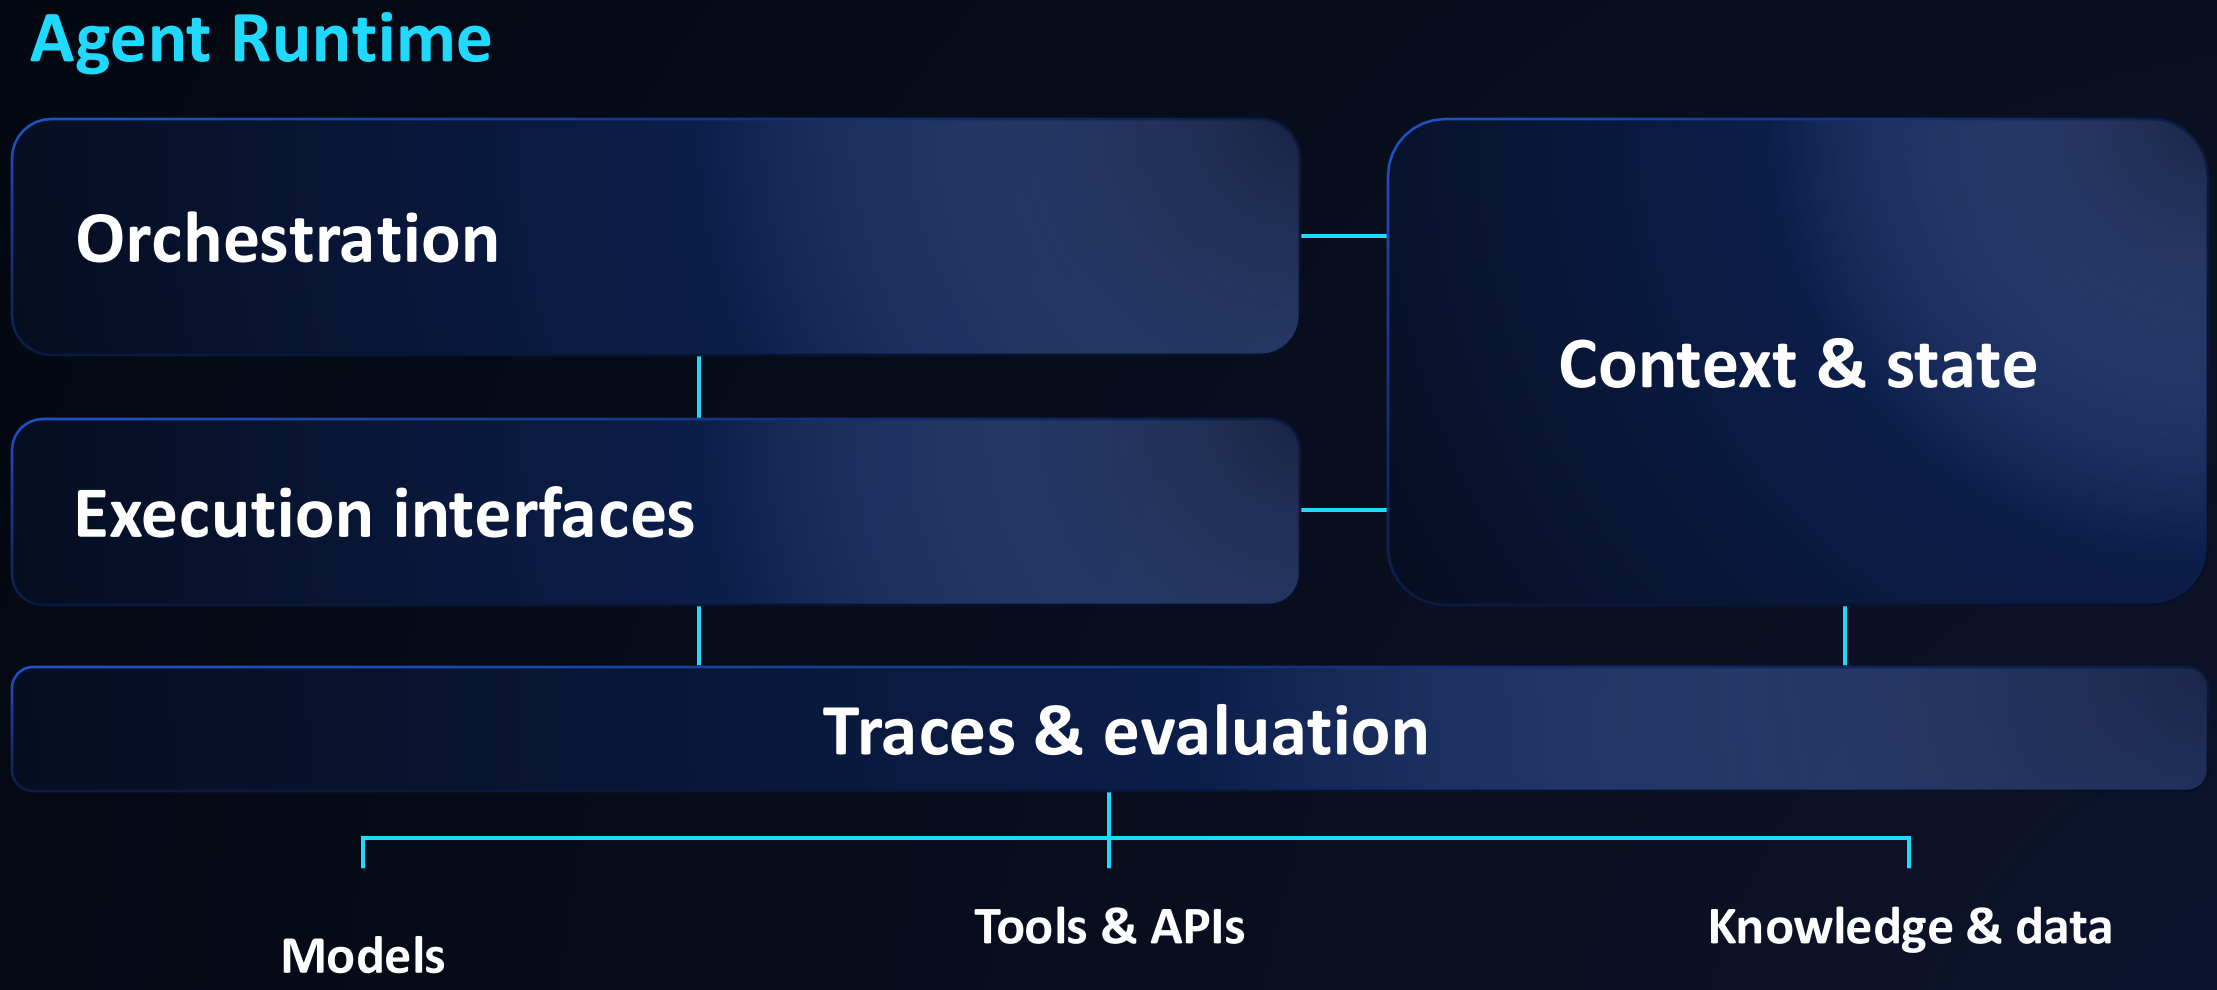

Each shift moves developers up one layer of abstraction.

Integration made LAMP work

Today's AI stack must work as one system too.

The AI Developer Stack

Coding agents	See the application, services and dependencies
Agent runtime	Carries tools, context, state and traces
Model services	Switch providers without rebuilding the application
Platform + data	Live and semantic context retains source permissions

Integration Contract — **No copied data pipelines · permissions travel with context**

Coding agent

SPACEX

Founded 2022

A coding agent for real software work

50,000+

Enterprises choose to build with Cursor

64%

Of Fortune 500 companies use Cursor

100M+

Lines of enterprise code written per day

VAST Customer

Long-time VAST customer; uses VAST infrastructure to train its own models.

Today's Build

Describe the work. Cursor helps turn your idea into running software, with FREE CREDITS.

VAST Data 2026 © All rights reserved

Model services

CoreWeave + NVIDIA

CoreWeave

51 AI data centers

Purpose-built AI cloud · NVIDIA accelerated computing

VAST × CoreWeave

Over 1 Exabyte of VAST in production

NVIDIA

AI's compute foundation

Accelerated GPUs underpin AI models and infrastructure.

VAST × NVIDIA

BlueField DPUs → CUDA-accelerated AI OS

Weights & Biases Inference

One API to general-purpose models on CoreWeave. FREE CREDITS provided

Agent runtime

VAST

Platform

Founded 2016

The data + agent platform beneath AI applications

Data Platform

Store and access enormous datasets

Agent Services

Reason · take action · build richer apps

Ready for Today's Build

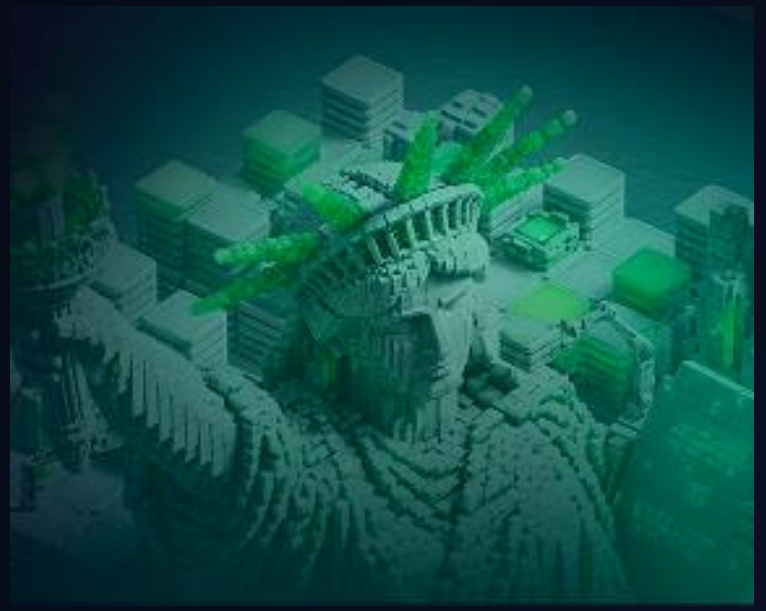

NVIDIA VSS Blueprint + video data loaded · Cursor skills ready for VAST

HACKATHON HOST

Francisco Terpolilli

Growth Engineer | SpaceXAI ambassador

SCHEDULE

09:30 AM	Keynote & opening remarks
10:00 AM	Hacking Begins
12:30 PM	Lunch
4:30 PM	Project submission deadline
4:45 PM	Judging/Demos
6:00 PM	Finalist presentations (Top 5 teams)
6:30 PM	Awards ceremony

VAST BUILDERS CHALLENGE

Build agents that unlock the value of video

Ship a real-time video agent that **understands footage and acts on it: search hours of video in plain language, ask what happened, spot events, or trigger an action** when something matters.

Use 3+ sponsor tools.

One idea. Working. Shipped by end of day.

JUDGING CRITERIA

Idea

Does the solution demonstrate a compelling application of video search and summary stack provided?

Technical Implementation

Is the software development high quality and easy to follow, reproduce, and evaluate? Is there clear documentation of inputs, outputs, and evaluation steps?

Design

Is the project design and user experience well thought out and intuitive?

Impact

Did the solution effectively use at least 3 sponsor tools?

Presentation (Demo)

Demonstration of the solution in 2 minutes (Demos > Slides)

Judging Details - Projects Due @ 4:30 PM

- **Submit Project by 4:30 PM.** Make sure everyone is on it.

  https://tokensand.com/vastnyc
- There are two judging rounds:
  - The first round of judging for top overall teams will take place in a designated area. 2 min demo. Don't present just a slidedeck.
  - Top 5 teams must be ready to present a 3 minute demo in front of everyone at 6pm.

Get connected & start building

WORKSHOP QUICK START

JOIN COSMOS

1	Venue Wi-Fi	SSID: Halkin-WiFi Guest Password: HalkinWorkspace
2	Cosmos	Go to community.vastdata.com/c/workshop
3	Workshop access	Go to workshop.thecosmoslabs.com/
4	Launch VM	passcode: londonbuilderschallenge
5	Team	Choose your team number: Team-1…Team-50 → Follow instructions, set up Cursor Remote SSH
